

# FREMONT CRACKS WALLOP OMAHA

Five-Man Team Takes Home Restaurants to Trimming Two Games Out of Three

# MEALE AND "DAD" LICKED OREGON ELEVEN

The Fremont team again displayed its bowling prowess for winning its match with the local all-star Home Restaurants. They opened up in the first game with a 1,039 count, giving them a 105-pin lead. In the second game they increased this to 127 pins. The last game was an exciting one, with the locals making a desperate effort to overcome the visitors lead. They fell short, however, the inal score being 2,908 for Fremont and 2,819 for the Home Restaurants. Hammond was the individual star with a 604 total. Douglas annexed high single game with 231.

A series of doubles was also won by the visitors. Middaugh and Hammond, representing Fremont, were pitted against Neale stud Huntington of Omaha. The visitors grabbed off a 101-pin lead in the first game. In the second game the locals reduced this lead to 58. The last game was the real thriller of the day. Huntington laid in six strikes in a row, which brought the game to a tie, but the Fremont pair finished out strong winning with a 17-pin lead.

The Storz-Brandeis Stores match on the Morrison alleys was won by the department store team with a 2,532 total against the brewers 2,527. The scores were:

Pacific Coast Team Defeats

Pennsylvania Warriors by

Fourteen to Nothing.

GREAT CROWD IS PRESENT

Pasadena, Cal., Jan. 1.—Before one of the greatest crowds that ever saw affoot ball game on the Pacific coast, the gridron warriors of the University of Oregon humbled the eleven of the University of Pennsylvania here today by a score of 14 to 0.

During the first half of the game both teams resorted constantly to bicking, in which Berry, the Pennsylvanian tried of field goals and failed. Neither side ran more than a few times with the ball.

Oregon Recovers Ball.

With the Pennsylvanians within stricking distance of the northwest-crners' goal, early in the third period, the casterners fumbled and Oregon recovered the ball. Then began the

Oregon Recovers Ball.

With the Pennsylvanians within stricking distance of the northwesterners' goal, early in the third period, the easterners fumbled and Oregon recovered the ball. Then began the reversal of form that had the thousands cheering like mad. Oregon began a smashing attack on the Pennsylvania center for short, sharp gains, which increased in length as the Red and Blue line began to erumble.

With an occasional forward pass, Oregon forced the ball to the visitors' twenty-yard line without losing it and S. Huntington tried and failed for a field goal. Upon recovering the ball, Oregon again began its march down the field and, without losing it, forced Tegart over for the first score, which S. Huntington converted.

The last period was a repetition of the third with Parsons going over the line, following a brilliant forty-five-yard rup. S. Huntington again kicked the goal.

# BASE BALL CLANS COME TO CINCINNATI

Annual Meeting of the National Commission Today.

## IS OUTPOINTED DRAFT QUESTION TO FORE FEATURES OF NEW MODELS CAN BE MADE CHEAPLY

New York, Jan. 1.—Les Darcy, the Australian middleweight champion, witnessed his first ring contest in America in Brooklyn today. In a ringsode box he watched Billy Miske of St. Paul and George "Knockout" Brown of Chicago fight ten hard rounds, in eight of which the St. Paul man gave the Chicagoan a beating.

Cincinnati, O., Jan. 1.—Base ball A general survey of the tendencies in prices and design of the automobile is made in the current issue of the Horseless Age. Last year, it will be remembered, says this automobile trade magazine, the outstanding feature of the season's announcements been called for 10 a. m., it is highly probable that it will be hours later before the supreme court of base ball in the number of models in the lower before the supreme court of base ball of St. Paul and George "Knockout" While the commission meeting has Brown of Chicago fight ten hard rounds, in eight of which the St. Paul man gave the Chicagoan a beating.

Miske, who is prominently mentioned as an opponent for Darcy, had the advantage in height, reach and five pounds in weight, but Brown withstood terrific punishment and was still fighting gamely when the bout ended. Brown won the first two recommission meeting has been called for 10 a. m., it is highly probable that it will be hours later before the supreme court of base ball really begins its work, inasmuch as there has been a special meeting called of the club owners of the three still fighting gamely when the bout ended. Brown won the first two called of the club owners of the three Class AA leagues, which has an indi-cated object the adoption of a suita-ble resolution for presentation to the commission asking that the drafting of players from Class AA leagues be abandoned.

abandoned.

While nothing official has been announced by the commission as to how it will look upon this demand, yet it has been unofficially indicated by President Johnson of the American league that the request would be denied.

Intend to Press Matter.

That the Class AA league men intend to press the matter with energy is indicated by the special meeting called for tomorrow, and while every club president of the American association and the International league is expected here, it is hardly probable that the Pacific Coast league will be represented by more than one man.

It is likewise probable that a large number of the major league magnates will attend, as a number of other matters that have to do with the relations between the major and minor league rlubs are believed to be on the list of matters to be considered by the commission. Intend to Press Matter.

er price classes and a correspond-ing decrease in the higher classes. This movement has not only entirely This movement has not only entirely ceased, but the price pendulum has ague thought that gasolene, while the leven begun to swing the other way. While the lowest price class has not been affected, it will be observed that there has been a marked reduction in the number of models in the class next to the lowest, from 22 to 17.2 per cent. The loss of this class is more than equalled by gains of the three classes next above. They are, therefore, many more models now being listed at between \$1,000 and \$2,000 than there were last year.

It is interesting to study developments in regard to cylinder numbers. First, it will be seen that the six-cylinder type is well holding its own, for while its percentage is slightly lower than for 1915, it is higher than for 1916. The sum total of the percentages of eight and twelve-cylinder models is exactly the same as it was last year, and the gain of the six-cylinder class has been wholly at the expense of the four.

were among members of the party.

Tearney proposes to present his plan for the redistricting of minor league territory to the commission. President Johnson has assured Tearney of his support.

Support.

This with construct more persect with construction of the smaller bore cylinders up to 2. The alcohol-air mixture can be safely subjected to pressures of 200 increases the stroke bore ratio decreases the stroke bore ratio decreases the stroke bore ratio decreases and the average stroke in all the safety limit for gasolene is eighty.

Pro-num-block is now the accepted practice in fi the 2,050 approaching the point of universality

in six-cylinder construction. This practice has been furthered by the simultaneous change from integral to detachable cylinder heads. What has be retarded the adoption of the en bloc

## ALCOHOL IS FUEL OF THE FUTURE

Watches Miske and Knockout Magnates Begin Gathering for Distinct Upward Trend in Mid- Expert Declares It Will Prove Satisfactory Substitute for Gasolene.

With approximately 3,000,000 motor vehicles doing duty in the United States, from 1,000,000,000 to 1,200,000,-000 gallons of gasolene have to be provided annually to keep them running. There are unmistakable signs that the production of this enormous volumes of gasolene will become increasingly difficult and as a con-sequence there is in the minds of many automobile engine students the

therefore, many more models now being listed at between \$1,000 and \$2,000 than there were last year.

The \$2,000-\$3,000 class remains substantially the same, while the highest priced class, above \$3,000, there is a further marked decline. The market is evidently still gravitating from the higher toward the moderate priced classes and the pressure of the demand has enabled manufacturers of moderate priced cars to raise their price somewhat, the constant advance in the price of nearly all materials and the scarcity of labor affording excellent reasons for the step.

It is interesting to study developments in regard to cylinder numbers. It is interesting to study developments in regard to cylinder numbers. It is listeresting to study developments in regard to cylinder numbers. It is listeresting to study developments in regard to cylinder numbers. The till the six-cylinder of the six-cylinder models is exactly the same as it was last year, and the gain of the six-cylinder class has been whells at was last year, and the gain of the six-cylinder class has been whells at was last year, and the gain of the six-cylinder class has been whells at was last year, and the gain of the six-cylinder class has been whells at was last year, and the gain of the six-cylinder class has been whells at was last year, and the gain of the six-cylinder class has been whells at was last year, and the gain of the six-cylinder work in this direction and for the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the substance that thus stands out the redominantly as the fuel of the subsubstance that thus stands out the redominantly as

The combustion products of al-cohol are smokeless, almost odorless and do not clog up the cylinders and

valves. The only serious difficulty encoun-tered would be the starting of the engine in cold weather, and this could be provided for by carrying a small auxiliary gasolene tank to be used in starting.

## Raw Materials Abundant.

The possible raw materials for al-ohol production are unlimited, for anything containing starch, cellulose or sugar can be utilized. In the case of starch we are limited at present to established crops, and the cost of the raw material from such substances the raw material from such substances as potatoes, maize and rice includes raising the crop, harvesting it, trans-portation to the distillery and the final conversion there to alcohol. As a consequence the cost of the raw material is too great, varying as it

does from 12 to 25 cents a gallon of finished alcohol.

Of all the above possible sources, the most interesting, owing to the low cost of raw material, is the waste from the lumber industry, particularly that in the form of sawdust or small chips. This material in the vicinity of sawmills or woodworking plants is often an item of loss owing to its production in excess of their own power requirements, its value never rising above 50 cents a ton, even when used as a source of power. The disposal of this superfluous waste from figures gathered by the forest products laboratory at Madison, Wis., costs from 30 to 60 cents a cord of 1,800 pounds, the total annual loss from this cause amounting annual loss from this cause amounting to about \$6,000,000 annually, in addi-tion /to the value of the wood so burned.

This represents an annual wastage of approximately 15,000,000 cords of wood, and constitutes only about 50 to 60 per cent of the total waste material produced in this form. Thus we see that there is produced annually in the United States waste material amounting in volume to about 30,000,-000 cords, or around 27,000,000 tons, which is now burned as the easiest method of getting rid of it.

## Wood Alcohol Useless as Fuel.

Wood Alcohol Useless as Fuel.

From experiments which have been carefully conducted by various experimenters a ton of dry sawdust has been found to yield with proper treatment around twenty to twenty-five gallons of 95 per cent alcohol (ethyl or grain alcohol, not wood alcohol, for this latter is useless for fuel purposes owing to the formation of products of combustion which would wreck the cylinders) and we could have therefore an estimated production from this source alone of around \$50,000,000 gallons analone of around 500,000,000 gallons an-

alone of around 500,000,000 gallons annually.

If we add to this the amount of wood wasted in the form of stumps and branches sufficiently thick to be barked, which on a conservative basis is equal in amount to the sawdust and chips produced, we would get from this "waste" wood a volume of alcohol alwayst sufficient to supply with fuel almost sufficient to supply with fuel even the stupendous number of auto-mobiles at present in use.—New York Herald.
